

### Description

The Transcell A1 Series is a drop-in replacement for the Chatillon CLC series load cells and the Lloyd Instruments XLC and YLC series load cells. The A1 Series is directly compatible with Chatillon CS and CS2Plus force testers and the entire line of Lloyd Instruments materials testing machines. The A1 Series improves on the original CLC, XLC and YLC designs by offering more responsive electronics, improved measurement performance, and more generous safe overload protection.

100kN unit (left)  
has standard safe  
overload.

## A1 Series | Load Cell Upgrade for Chatillon and Lloyd Instruments Testing Systems

### Protective Case

Each A1 Series load cell is shipped within its own protective carrying case. The exterior label identifies load cell capacity and model number. The interior is lined with a special anti-static foam that protects from both electrical and mechanical shock loads.
